Temporal and Spatial Regulation of Plant Genes

By -

Springer. Paperback. Book Condition: New. Paperback. 344 pages. Dimensions: 9.6in. x 6.7in. x 0.9in. First attempts to isolate plant genes were for those genes that are abundantly expressed in a particular plant organ at a specific stage of development. However, many important gene products are produced in a very minute quantity and in specialized cell types. Such genes can now be isolated using a variety of approaches, some of which are described in this volume. The rapid progress during the last decade in regeneration of a number of crop plants and the availability of molecular tools to introduce foreign genes in plants is allowing the engineering of specific traits of agricultural importance. These genes must, however, be regulated in a spatial and temporal manner in order to have desired effects on plant development and productivity. The habitat of plants necessitate adaptive responses with respect to the environmental changes. Starting from germination of the seed, the plant begins to sense environmental cues such as moisture, light, temperature and the presence of pathogens, and begins to respond to them. Little is known about various signal transduction pathways that lead to biochemical and morphogenetic responses, in particular, transition from vegetative...

Reviews

Without doubt, this is the best job by any writer. It is amongst the most incredible ebook i have got study. You may like how the author write this publication.

-- **Dr. Brendon Kautzer II**

This ebook is great. It can be rally intriguing throug studying time period. Your lifestyle period is going to be convert as soon as you full looking over this ebook.
