Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 Excerpt: .because it is too light for a calcareous deposit of that size; and, secondly, we know if we study the eyes of birds we find in the vitreous body a lot of deposit of osseous matter. If you take the eye of an old rooster you will oftentimes find a lot of ossification there; you do not find a calcareous deposit. Then in those birds that fly very high or have to withstand the pressure of the air, you find in front of the macula, partly covering the papillae of the nerve, an arrangement that looks like a spread hand, and which is supposed to be folded in front of the eye to protect it from too high pressure on the nerve, and if you take out this thing you find that it is the very finest osseous formation. Calcareous deposits you will mostly find in the front part of the eye, in the rear part you do not find them. These osseous deposits, however, are very rare in the human eye. Chronic Interstitial Nephritis in Childhood.--Leonard G. Guthrie (Lancet). This paper is based on 7 cases occurring in children between 5 and 14 years, who succumbed to chronic interstitial nephritis. The diagnosis was confirmed in each case by autopsy. According to the author the most striking physical signs which attended the disease are: 1. Wasting; 2. Dryness, absence of perspiration, coarseness, elasticity and pigmentation of the skin, together with anemia; 3. High arterial tension...
